Materials and Systems

## Challenge of Climate Change

*Talks given in German, with English subtitles*  
*Moderation: Jan Friedrich, Editor Bauwelt*

### **Green Hydrogen - contribution to climate neutral cities**

Prof. Dr.-Ing. Norbert Fisch, Consultant Energy and MEP Engineering

### **Concepts and Ideas about Architecture in 2050**

Martin Haas, haascookzemmrich STUDIO2050

The current debate about a responsible quality of life shows a fundamental change in our society that goes far beyond the issues of environmental protection and the climate crisis. It is crucial to reconcile mankind, space and our daily routines into a harmonious relationship. This is why we as architects; designers of space patterns, play a particularly important role in re-establishing this relationship to create a state of co-habitation.

### **Slow Architecture**

*(Talk given in English with German subtitles)*

Prof. Dr. Anupama Kundoo, Anupama Kundoo architects

Anupama Kundoo will discuss the potential of architecture to address complex intersections of urbanisation, people, technologies, resources, and environment within the context of growing affordability issues. Her practice, the result of her quest for knowledge to build appropriately considers projects as opportunities to build knowledge and build. Architecture is the result of building processes, and time needs to be invested despite the sense of urgency triggered by rapid urbanisation.

### **Panel discussion**
