innovation award 2021

Cluster Cables, Coils & Hybrids – Schleuniger AG

Transfer Line Family S70

The S70 is a modular platform for processing coaxial and multi-conductor cables, which are primarily used in the automotive industry in the high-voltage and e-mobility sectors. The modular design allows extremely high flexibility in the configuration of the platform. It can be expanded on site - on the customer's factory floor. New base modules and stations can be easily integrated. This allows users to customize the platform and gradually increase the level of automation. Previously laborious manual processes are automated with the S70 and achieve repeatable and highly pre-

cise quality. This means maximum process reliability and the reliable fulfillment of high industry standards.

Dr. Frank Breme, Head of Business Segment Solutions & Software:

“We are proud that our automation platform won this year’s Innovation Award. As we see it, the combination of high cable quality and optimal output was what ultimately tipped the scales in our favor. The automation platform’s flexibility is also worth mentioning as it processes different cable types and adapts to different automation levels in the product life cycle. With this innovation, we are confident that we can fully meet customer needs in the e-mobility space, a current mega trend.”

About Schleuniger

Schleuniger is a global technology company and a leading solutions supplier to the wire processing and testing industry. Schleuniger solutions are found everywhere precise connections, maximum productivity, reliable data traceability, and coherent value chains are required.
